PLACENTAS WITH THE FOLLOWING ARE NOT INDICATED FOR HISTOLOGICAL EXAMINATION UNLESS THERE ARE ADDITIONAL RELEVANT INDICATIONS:

- | | |
|--|---|
| <ul style="list-style-type: none"> • Maternal Group B streptococcus • Maternal diabetes or other maternal disease with normal pregnancy outcome • Known trisomy 13, 18, 21 / Turners • Congenital anomaly • Uncomplicated twin pregnancy • Twins for assessment of chorionicity • "Gritty" placenta • Placenta praevia | <ul style="list-style-type: none"> • Post-partum haemorrhage • Polyhydramnios • History of previous molar pregnancy • Cholestasis • Hepatitis B/C, HIV • Single umbilical artery • Uncomplicated velamentous cord • Placenta with accessory lobe. |
|--|---|

If placentas are received from the "not indicated" list or without adequate clinical information, the placenta will be macroscopically examined only and histological blocks kept. If further information is forthcoming, histological examination can be requested by contacting PCH Anatomical Pathology at Perth Children's Hospital on 6456 3296 and providing appropriate clinical information to guide examination.
